

The half-tones from original photographs are excellent and varied. The common birds are considered under the convenient and rather novel headings of (1) 'bird and mammal eaters'; (2) 'fish, frog and crayfish eaters', including 'stalkers, plungers, divers'; (3) 'insect eaters',—'strainers, probers, scratchers, borers, gleaners'; (4) 'vegetable feeders',—seed eaters, fruit eaters. A convincing colored plate by L. A. Fuertes depicts the Horned Owl, Cooper's and Sharp-shinned Hawks devouring respectively a chicken, pigeon and robin, while the Marsh Hawk, Red-tailed Hawk and Barred Owl are feasting on meadow mice and a rat, and the Sparrow Hawk on a grasshopper. Dr. Allen has produced a valuable addition to the literature of bird protection, which could be reprinted for use in a much wider field with advantage.—W. S.

Simpson's 'Pheasant Farming',¹—This is a most attractive little brochure, illustrated by half-tones from photographs and drawings, and a colored plate by Bruce Horsfall. The chapter headings give a good idea of the contents: 'Propagation of Game Birds'; 'Varieties of Pheasants'; 'The Chinese Pheasant in Oregon'; 'Equipment for a Pheasant Farm'; 'The Ideal Mother for Pheasants'; 'Food for Young Pheasants'; 'Enemies of the Game Breeder'; 'Advice to Beginners'.

The demand for game and the absolute necessity of preventing the marketing of native species will make this industry of constantly increasing importance and this excellent little pamphlet will be in much demand.—W. S.

Recent Biological Survey Publications.—The ornithological activities of the Survey as set forth in the annual report of the chief, Mr. Henry W. Henshaw,² covered the food of Wild Ducks; the relation of birds to the Boll and Alfalfa Weevils and to the Range Caterpillar; the economic status of the Starling; and the general protection and attracting of birds and enforcement of the migratory bird law.

Mr. W. L. McAtee has prepared a timely report on 'How to attract Birds'³ covering protection of grounds from cats, and the preparations of all sorts of feeding and shelter devices. There is also appended a valuable list of wild fruit and berry bearing trees and shrubs with their fruiting seasons. A report on the food of Robins and Bluebirds⁴ by Prof. Beal sets forth in great detail the animal and vegetable food of these familiar birds as shown by the extended investigations of the Biological Survey.
